

ALARA Plan for Shutdown Start

Tuesday, February 21, at 08:00 am:

Booster loss watt limit down to 200 W from 500 W.

Stacking rate at $8e12$ at M:TOR109 per batch every 2.4 secs ($\sim 80W$).

Remaining ~ 120 W will be divided evenly between NUMI and MiniBooNE.

Thursday, February 23, at 08:00 am:

Pbar stacking so that the Main Injector loss rate drops from the present average of 420 W (~ 1 KJ/2.4 sec) to 140 W (330 KJ/2.4sec).

NUMI to 1 turn per batch with 5 batches per cycle with a cycle time ~ 2.4 secs.

MiniBooNE to 1 turn per batch up to a Booster watt limit of 200 W.

Monday, February 27, at 00:01 am:

Shut off Proton Source.

Tentative AEM Schedule during Shutdown Period

Typically, meet first Monday of each month.

In detail, All Experimenters Meetings on

February 20, 27

March 6

April 3

May 1, 22 (scheduled startup of Booster)

(no meeting Memorial Day 29th)

June – meet every week starting 5th

Watch NALCAL for any changes.
