

# COLLOQUIUM

## Discovery of the Upsilon and Bottom Quark-a personal reminiscence 40 years later

**Jeffrey A Appel**

Fermilab

**May 31, 2017**

4:00 p.m. - Wilson Hall, One West

The discovery of the upsilon particle at Fermilab occurred forty years ago. The new particle helped spur acceptance of the three-generation quark-lepton standard model and the search for the top quark. The discovery itself had a surprising history which will be recounted in this colloquium, including some untold stories from inside the collaboration.
