Medical Comments: The employee experienced pain in left elbow while trying to turn a wheel on a valve. Given elbow band (not rigid.)

ES&H Comments: Individual was performing a disablement of a sprinkler system for a contractor at CDF. He was in the process of closing the OS&Y (Outside Screw and Yoke) control valve supplying water to the sprinkler system. The valve was turning freely when it suddenly hit resistance at 75% closed. The resistance caused an unexpected mechanical shock to the individuals left arm resulting in elbow pain. He completed the valve closure and reported to the medical department for evaluation. The treatment was initially first aid however the pain did not subside and was sent offsite to an orthopedic for evaluation. The individual is restricted from using his left arm for approx. 1 month. This will require his job to be modified to accommodate the limitations. This case is DART.
